

Appointment of Senior Controls Engineer

September 2017: The Telford-based control systems integrator Transicon Ltd has further strengthened its project engineering team with the appointment of Pete Mouldsdale as Senior Controls Engineer.

With a track record of more than 25 years design experience with SCADA, PLC and process control systems, Pete takes up this new position with responsibilities for delivering the company's integrated control and automation solutions.

"Pete's appointment reflects the Company's continuing success in expanding our customer base during recent years and requiring additional engineers to support them," says Transicon's Sales & Marketing Director, Richard Cotsford. "We have continued to strengthen our position following last year's excellent results, and need expansion of our engineering capability for the future. I am therefore delighted to welcome Pete to the Transicon team, especially as he has first-hand experience of engineering solutions in the food/dairy and coil processing industries which will help continue to strengthen our position in these market segments "

"Clearly his process and dairy industry knowledge and experience with Siemens products along with other major manufactures will be invaluable in further developing new customers to reinforce Transicon's position as a leading supplier of industrial drives, automation and control systems."

About Pete Mouldsdale

A Chartered Electrical Engineer born and raised in Nottinghamshire studied at Sheffield City Polytechnic obtaining a BEng. (Hons) in Electronic Systems & Control Engineering and a Master of Science (MSc) in Process Automation from University of Newcastle-upon-Tyne (Dissertation: Integrated Approach to the Monitoring, Analysis and Control of Complex Filling Lines).

Pete enjoys walking his dogs and clay target shooting. "I am looking forward to contributing and working with some of the best engineers in the business. Along with process automation, PLC and drives knowledge, my experience will be invaluable in developing new opportunities for the business" says Pete.

About Transicon Ltd

Telford-based Transicon has a pedigree of 50 years' experience in the design, manufacture, installation and commissioning of drive and automation solutions. The company's offerings include drives systems, PLC and SCADA software programming, HMIs, motor control centres and custom-built panels, as well as high accuracy AC, DC and servo drives and motors.

Certified to BS EN ISO 9001:2008 quality standards, BSI-registered, NICEIC-approved contractor and with SafeContractor accreditation Transicon also offers a comprehensive range of management, consultancy, assembly, testing and support services to customers throughout the utilities, manufacturing, process engineering, marine and automation sectors.
